

Abhirama Prabhu's Reports

Comments: Correspondence between Abhirama Dasa and Tamal Krishna Goswami in regards to Prabhupada's chart. He gives important information about Prabhupada's time of birth and indicates that Prabhupada favored a time of 4:00PM or later, not sooner.

Report of Visit to Astrologer
Mr. Ojha: on the 10th August 1977
(93, Daryaganj, New Delhi)

I enquired what was the fatal date.

He calculated that according to the
stars at birth Sula P. Bhupada would
live for 81 years 5 months and 29 days.

In other words on the 28th of February
1978 — But he further stressed that this is
true only for an ordinary man, that the
pious activities and spiritual activities
very often prolong the life.

The next 6 months would be difficult
especially the first week of Sept. when Saturn
would pass over Ketu and agitate it, causing
weakness, and possibly trouble from jaundice.

If he passed thru 1978 then he should
not have trouble for 4 or 5 years at which
time his health would suffer again.

On Feb. 28, 1978 is the completion
of one Ketu Mahadesha.

He recommended that the Blue Sapphire
as well as Ayurvedic treatment could
give relief during this period.

Arjuna Rao

I visited the astrologer and inquired about Sula Prabhupada's horoscope if it were calculated at 4:30 or 5:00. He calculated that it would remain the same between the hours of 4:00 & 5:00.

I enquired about his traveling and he said it was a good idea for him to travel west of his birthplace as it would change the horoscope slightly for the better because of the difference in his earthly position. He said that going east would make it worse. He also said that in the old days when a person was sick they would change their name or place of residence.

He said the most auspicious day to begin the journey was on August 29th and morning of the 30th.

Not that he said Sula Prabhupada had to go, but he thought it was a good idea.
